## *General Information Concerning Patents*

In view of the large amount of mail received by the Patent Office, a copy of this pamphlet, with particular sections marked when appropriate, may be sent in reply to inquiries, and is intended as a courteous reply.

### PURPOSE OF THIS BOOKLET

The purpose of this booklet is to give some general information about patents and about the workings of the Patent Office. It answers many questions which are commonly asked of the Patent Office. It is not intended for the patent lawyer, nor is it intended to be a textbook on patent law. Consequently, many details are omitted and complications have been avoided as much as possible. It is hoped that this pamphlet will be useful to inventors and prospective applicants for patents, to students, and to others who may be interested in its subject matter, to give them a brief general introduction to the subject. Additional information may be obtained from the publications: *Patent Laws*, and *Rules of Practice in Patent Cases*, listed on page 7. The Patent Office does not publish any textbooks on patent law, but a number of such works both for the specialist and for the general reader, have been published by private concerns.

### WHAT IS A PATENT?

A patent for an invention is a grant by the Government to the inventor (or his heirs or assigns) of certain exclusive rights to his invention for the term of 17 years, throughout the United States.

A patent is granted by the Government acting through the Patent Office. The subject matter of the patent grant is an invention.

The person entitled to receive the patent grant is the inventor (or his heirs or assigns).

The duration of the patent grant is 17 years.

The right conferred by the patent grant extends throughout the United States and its Territories and possessions.

The right conferred by the patent grant is, in the language of the statute and of the grant itself, "the right to exclude others from making, using, or selling" the invention. What is granted is not the right to make, use, or sell, but the right to exclude others from making, using, or selling the invention.

Most of the statements made in the preceding paragraphs will be explained in greater detail in later sections.

Some persons occasionally confuse patents, copyrights, and trademarks. Although there may be some resemblance in the rights of these three kinds of intangible property, they are completely different and serve different purposes.

### *Copyrights*

Copyright protects the writings of an author against copying. Literary, dramatic, musical and artistic works are included within the protection of the copyright law, which in some instances also confers performing and recording rights. The copyright goes to the form of expression rather than to the subject matter of the writing. A description of a machine could be copyrighted as a writing, but this would only prevent others from copying the description—it would not prevent others from writing a description of their own or from making and using the machine. Copyrights are registered in the Copyright Office in the Library of Congress and the Patent Office has nothing whatever to do with copyrights. Information concerning copyrights may be obtained by addressing: Register of Copyrights, Library of Congress, Washington, D.C., 20540.

### *Trademarks*

A trademark relates to the name or symbol used in trade with goods to indicate the source or origin of the goods. Trademark rights will prevent others from using the same name on the same goods, but do not prevent others from making the same goods without using the trademark. Trademarks which are used in interstate or foreign commerce may be registered in the Patent Office. The procedure relating to the registration of trademarks and some general information concerning trademarks is given in a pamphlet called *General Information Concerning Trademarks*, which may be obtained from the Patent Office on request.

## PATENT LAWS

The Constitution of the United States gives Congress the power to enact laws relating to patents, in Article 1, section 8, which reads "Congress shall have power . . . to promote the progress of science and useful arts, by securing, for limited times to authors and inventors, the exclusive right to their respective writings and discoveries." Under this power Congress has from time to time enacted various laws relating to patents. The first patent law was enacted in 1790. The law now in effect is a general revision

which was enacted July 19, 1952, and which came into effect January 1, 1953. This law is reprinted in a pamphlet entitled *Patent Laws*, which is sold by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402.

The patent law specifies the subject matter for which a patent may be obtained and the conditions for patentability. The law establishes the Patent Office for administering the law relating to the granting of patents, and contains various other provisions relating to patents.

## WHAT CAN BE PATENTED

The patent law specifies the general field of subject matter that can be patented, and the conditions under which a patent may be obtained.

In the language of the statute, any person who "invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvements thereof, may obtain a patent," subject to the conditions and requirements of the law. By the word "process" is meant a process or method, and new processes, primarily industrial or technical processes, may be patented. The term "machine" used in the statute needs no explanation. The term "manufacture" refers to articles which are made, and includes all manufactured articles. The term "composition of matter" relates to chemical compositions and may include mixtures of ingredients as well as new chemical compounds. These classes of subject matter taken together include practically everything which is made by man and the processes for making them.

The Atomic Energy Act of 1954 excludes the patenting of inventions useful solely in the utilization of special nuclear material or atomic energy for atomic weapons.

The statute specifies that the subject matter must be "useful." The term "useful" in this connection refers to the condition that the subject matter has a useful purpose and also includes operativeness, that is, a machine which will not operate to perform the intended purpose would not be called useful. Alleged inventions of perpetual motion machines are refused patents.

Interpretations of the statute by the courts have defined the limits of the field of subject matter which can be patented, thus it has been held that methods of doing business and printed matter cannot be patented. In the case of mixtures of ingredients, such as medicines, a patent cannot be granted unless there is more to the mixture than the effect of its components. (So-called patent medicines are ordinarily not patented; the phrase "patent medicine" in this connection does not have the meaning that the medicine is patented.) It is often said that a patent cannot be obtained upon a mere idea or suggestion. The patent is granted upon the new machine, manufacture, etc., as has been said, and not upon the idea or suggestion of the new machine. As will be stated later, a complete description of the actual machine or other subject matter sought to be patented is required.

## NOVELTY AND OTHER CONDITIONS FOR OBTAINING A PATENT

In order for an invention to be patentable it must be new as defined in the statute. The statute provides that an invention cannot be patented if—

“(a) The invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for patent, or

“(b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country more than one year prior to the date of the application for patent in the United States. . . .

If the invention has been described in a printed publication anywhere in the world, or if it has been in public use or on sale in this country before the date that the applicant made his invention, a patent cannot be obtained. If the invention has been described in a printed publication anywhere, or has been in public use or on sale in this country more than one year before the date on which an application for patent is filed in this country, a valid patent cannot be obtained. In this connection it is immaterial when the invention was made, or whether the printed publication or public use was by the inventor himself or by someone else. If the inventor describes the invention in a printed publication or uses the invention publicly, or places it on sale, he must apply for a patent before one year has gone by, otherwise any right to a patent will be lost.

Even if the subject matter sought to be patented is not exactly shown by the prior art, and involves one or more differences over the most nearly similar thing already known, a patent may still be refused if the differences would be obvious. The subject matter sought to be patented must be sufficiently different from what has been used or described before so that it may be said to amount to invention over the prior art. Small advances that would be obvious to a person having ordinary skill in the art are not considered inventions capable of being patented. For example, the substitution of one material for another, or changes in size, are ordinarily not patentable.

## THE UNITED STATES PATENT OFFICE

Congress has established the United States Patent Office to perform the function of issuing patents on behalf of the Government. The Patent Office as a distinct bureau may be said to date from the year 1802 when a separate official in the Department of State who became known as “Superintendent of Patents” was placed in charge of patents. The revision of the patent laws enacted in 1836 reorganized the Patent Office and designated the official in charge as Commissioner of Patents. The Patent Office remained in the Department of State until 1849 when it was transferred to the Department of the Interior, and in 1925 it was transferred to the Department of Commerce, in which Department it is today.

The chief functions of the Patent Office are to administer the patent laws as they relate to the granting of letters patent for inventions, and to perform other duties relating to patents. It examines applications for patents to ascertain if the applicants are entitled to patents under the law, and grants the patents when they are so entitled; it publishes issued patents and various publications concerning patents and patent laws, records assignments of patents, maintains a search room for the use of the public to examine issued patents and records, supplies copies of records and other papers, and the like. Analogous and similar functions are performed with respect to the registration of trademarks. The Patent Office has no jurisdiction over questions of infringement and the enforcement of patents, nor over matters relating to the promotion or utilization of patents or inventions.

The head of the Office is the Commissioner of Patents and his staff includes several assistant commissioners of patents and other officials. As head of the office, the Commissioner superintends or performs all duties respecting the granting and issuing of patents and the registration of trademarks; exercises general supervision over the entire work of the Patent Office; prescribes the rules, subject to the approval of the Secretary of Commerce, for the conduct of proceedings in the Patent Office and for recognition of attorneys and agents; decides various questions brought before him by petition as prescribed by the rules, and performs other duties necessary and required for the administration of the Patent Office and the performance of its functions.

The examination of applications for patents is the largest and most important function of the Patent Office. The work is divided among a number of examining groups, each group having jurisdiction over certain assigned fields of invention. Each group is headed by a group manager and staffed by a number of examiners. The examiners perform the work of examining applications for patents and determine whether patents can be granted. An appeal can be taken to the Board of Appeals from their decisions refusing patents and a review by the Commissioner of Patents may be had on other matters by petition. The examiners also determine when an interference exists between pending applications, or a pending application and a patent, institute interference proceedings in such cases and hear and decide certain preliminary questions raised by contestants.

In addition to the examining groups, the Patent Office has a number of sections, divisions, or branches which perform various other services, such as receiving and distributing mail, receiving new applications, handling sales of printed copies of patents, making copies of records, inspecting drawings, recording assignments, and so on.

At the present time the Patent Office has about 2,400 employees, of whom about half are examiners and others with technical and legal training. Patent applications are received at the rate of over 80,000 per year. The Patent Office receives over two and a half million pieces of mail each year.

## PUBLICATIONS OF THE PATENT OFFICE

*Patents.*—The specification and accompanying drawings of all patents are published on the day they are granted, and printed copies are sold to the public by the Patent Office. Over 3,000,000 patents have been issued.

Printed copies of any patent identified by its patent number, may be purchased from the Patent Office at a cost of 25 cents each, postage free, except design patents which are 10 cents each.

Future patents classified in subclasses containing subject matter of interest may be obtained, as they issue, by prepayment of a deposit and a service charge. For the cost of such subscription service, a separate inquiry should be sent to the Patent Office.

*Official Gazette of the United States Patent Office.*—The Official Gazette of the United States Patent Office is the official journal relating to patents and trademarks. It has been published weekly since January 1872 (replacing the old Patent Office Reports), and is now issued each Tuesday, simultaneously with the weekly issue of the patents. It contains a claim and a selected figure of the drawings of each patent granted on that day; decisions in patent and trademark cases rendered by the courts and the Patent Office; notices of patent and trademark suits; indexes of patents and patentees; list of patents available for license or sale; and much general information such as orders, notices, changes in rules, changes in classification, etc. The Official Gazette is sold, by annual subscription and in single copies, by the Superintendent of Documents, Washington, D.C.

Beginning with July 1952, the illustrations and claims of the patents are arranged in order according to the Patent Office classification of subject matter. New patents relating to any particular field can thus be located more readily. Copies of the Official Gazette may be found in public libraries of larger cities.

*Index of Patents.*—This annual index to the Official Gazette contains an alphabetical index of the names of patentees and a list identifying the subject matter of the patents granted during the calendar year. Copies are sold by the Superintendent of Documents. At present it is issued in two volumes, one for patents and one for trademarks.

*Decisions of the Commissioner of Patents.*—There is issued annually a volume republishing the decisions which have been published weekly in the Official Gazette. Copies are sold by the Superintendent of Documents.

*Manual of Classification.*—This is a loose-leaf book containing a list of all the classes and subclasses of inventions in the Patent Office classification of patents, a subject matter index, and other information relating to classification. Substitute pages are issued from time to time. The manual and subscriptions for the substitute pages are sold by the Superintendent of Documents.

*Classification Bulletins.*—The various changes and advances in classification made from time to time are collected and published in bulletins which give

these changes and the definitions of new and revised classes and subclasses. These bulletins are sold by the Superintendent of Documents and the Patent Office.

*Patent Laws.*—A compilation of the patent laws in force is issued, and revised editions are published from time to time. Copies may be purchased from the Superintendent of Documents.

*Rules of Practice of the United States Patent Office in Patent Cases.*—This publication contains the rules governing the procedures in the Patent Office which have been adopted by the Commissioner under the authority of the patent statutes and approved by the Secretary of Commerce, and supplementary material including forms and relevant sections of the patent law. Copies may be purchased from the Superintendent of Documents.

*Trademark Rules of Practice of the United States Patent Office With Forms and Statutes.*—This publication contains the rules governing the procedure in the Patent Office in trademark matters and a compilation of trademark laws in force. Sold by the Superintendent of Documents.

*General Information Concerning Patents.*—This pamphlet is designed for the layman and contains a large amount of general information concerning the granting of patents expressed in non-technical language. Single copies are distributed by the Commissioner free on request.

*General Information Concerning Trademarks.*—This pamphlet serves the same purpose with reference to trademarks as the preceding does concerning patents.

*Patents and Inventions, an Information Aid for Inventors.*—The purpose of this pamphlet is to help inventors in deciding whether to apply for patents, in obtaining patent protection and in promoting their inventions. Copies may be purchased from the Superintendent of Documents.

*Roster of Attorneys and Agents Registered to Practice Before the United States Patent Office.*—This list of registered attorneys and agents, arranged alphabetically, is sold by the Superintendent of Documents.

*Patent Attorneys and Agents Available to Represent Inventors Before the United States Patent Office Arranged by States and Countries.*—This pamphlet lists only those patent attorneys and agents registered to prepare and prosecute patent applications before the Patent Office, who are available to represent individual inventors and companies. Attorneys and agents who are not available to represent individual inventors and companies because they are employed by a corporate employer or by the U.S. Government, are not listed.

*Manual of Patent Examining Procedure.*—This manual is written for examiners in the Patent Office and gives in great detail the procedures followed by the examiners. It is available to the public and is sold by the Superintendent of Documents.

*Guide for Patent Draftsmen.*—A statement of Office requirements for patent drawings with illustrations. Sold by the Superintendent of Documents.

*How To Obtain Information From United States Patents.*—This pamphlet contains much helpful information on how to best utilize the facilities and publications of the United States Patent Office. It gives the inventor instructions on such subjects as how to make a patent search, use of the *Official Gazette*, and obtaining information from Patent Copy Libraries. Copies are available from the Superintendent of Documents.

SEE PAGE 33 FOR PRICES OF PUBLICATIONS.

## GENERAL INFORMATION AND CORRESPONDENCE

All business with the Patent Office should be transacted in writing and all letters addressed to the Commissioner of Patents, Washington, D.C., 20231. The personal attendance of applicants at the Patent Office is unnecessary.

Applicants and attorneys will be required to conduct their business with the Office with decorum and courtesy. Papers presented in violation of this requirement will be returned.

A separate letter (but not necessarily a separate envelope) should be written in relation to each distinct subject of inquiry such as assignments for recording, payment of final fees, orders for printed copies of patents, orders for photographic copies of records, and requests for other services. None of these should be included with letters responding to Office actions in applications (p. 18).

When a letter concerns a patent, it should state the name of the patentee, the invention, and the patent number and date.

In making inquiry concerning the status of an application, the inventor should be sure to give its serial number and filing date.

An order for a copy of assignment must give the liber and page or reel and frame of the record, as well as the name of the inventor; otherwise an extra charge will be made for the time consumed in making any search for such assignment.

Applications for patents are not open to the public and no information concerning them is given except on written authority of the applicant, his assignee, or his attorney, or when necessary to the conduct of the business of the Office. Patents and the records relating to the same including any decisions therein, the records of assignments, books, and other records and papers in the Office, are open to the public and may be inspected in the Patent Office or copies may be ordered.

The Office cannot respond to inquiries concerning the novelty and patentability of an invention in advance of the filing of an application, nor give advice as to possible infringement of a patent, nor advise of the propriety of filing an application, nor respond to inquiries as to whether any alleged invention has been patented, and if so, to whom, nor can the Office act as an expounder of the patent law nor as counselor for individuals, except in deciding questions arising before it in regularly filed cases. Information of a general nature may be furnished either directly or by supplying or calling attention to an appropriate publication.

## LIBRARY, SEARCH ROOM, SEARCHES

The Scientific Library of the Patent Office contains over 121,000 volumes of scientific and technical books in various languages, about 81,000 bound volumes of periodicals devoted to science and technology, the official journals of foreign patent offices, and over 7,500,000 copies of foreign patents in bound volumes. In many cases there are two sets of foreign patents, one set arranged in numerical order and one set classified according to the classification of the country of origin of the patent.

A search room is maintained for the benefit of the public in searching and examining United States patents. It contains a set of United States patents granted since 1836 arranged according to the Patent Office classification. By searching in these classified patents, it is possible to determine, before actually filing an application, whether an invention has been anticipated by a United States patent, and it is possible to obtain the information contained in the patents relating to any field of endeavor. In the Patent Office, patents are classified into **310 classes** and over 64,000 subclasses.

Adjoining the search room is a record room in which the public may inspect the records and files of issued patents and such other records as may be open to their inspection. The record room contains a set of United States patents arranged in numerical order and a complete set of the Official Gazette.

Applicants and their attorneys or agents may examine their own cases in the record room, and public records may be examined in the record room, search room, or library, as the case may be. Applicants, their attorneys or agents, and the general public are not entitled to use the records and files in the examiners' rooms.

The search room and Scientific Library are open during office hours from 8:30 a.m. to 5 p.m. on workdays. In addition, the search room is open in the evenings from 5 to 9 on workdays, and on Saturdays from 8:30 a.m. to 12:30 p.m.

Since a patent is not always granted when an application is filed, many inventors attempt to make their own investigation before applying for a patent. This may be done in the search room of the Patent Office, and to a limited extent in some public libraries or through whatever sources of published knowledge that may be available. Patent attorneys or agents may be employed to make a so-called preliminary search through the prior United States patents to discover if the particular device or one similar to it has been shown in some prior patent. This search is not always as complete as that made by the Patent Office during the examination of an application, but only serves, as its name indicates, a preliminary purpose. For this reason, the Patent Office examiner may, and often does, reject claims in an application on the basis of prior patents or publications not found in the preliminary search.

Those who cannot come to the Search Room in Washington may order from the Patent Office copies of lists of original patents or of crossreferenced patents contained in the subclasses comprising the field of search, and inspect printed copies of the patents in a library which has a numerically

arranged set of patents. These libraries and their locations are: Albany, N.Y., University of State of New York; Atlanta, Ga., Georgia Tech Library; Boston, Mass., Public Library; Buffalo, N.Y., Buffalo and Erie County Public Library; Chicago, Ill., Public Library; Cincinnati, Ohio, Public Library; Cleveland, Ohio, Public Library; Columbus, Ohio, Ohio State University Library; Detroit, Mich., Public Library; Kansas City, Mo., Linda Hall Library; Los Angeles, Calif., Public Library; Madison, Wis., State Historical Society of Wisconsin; Milwaukee, Wis., Public Library; Newark, N.J., Public Library; New York, N.Y., Public Library; Philadelphia, Pa., Franklin Institute; Pittsburgh, Pa., Carnegie Library; Providence, R.I., Public Library; St. Louis, Mo., Public Library; Stillwater, Okla., Oklahoma Agricultural and Mechanical College; Sunnyvale, Calif., Public Library<sup>1</sup>; Toledo, Ohio, Public Library.

The Patent Office has also prepared on microfilm lists of the numbers of the patents issued in each of its subclasses, and many libraries have purchased copies of these lists. In libraries which have the lists and a copy of the Manual of Classification, and also a set of patent copies or the Official Gazette, it will be unnecessary for the searcher to communicate with the Patent Office before commencing his search, as he can learn from the Manual of Classification the subclasses which his search should include, then identify the numbers of the patents in these subclasses from the microfilm lists, and examine the patent copies so identified, or the disclosures of these patents in the Official Gazette volumes.

While the classification printed on any patent is correct at the time the patent is issued, it should be noted that the constantly expanding arts often require reclassification. As a result, the classification indicated on the patent may be incorrect at a later date.

## ATTORNEYS AND AGENTS

The preparation of an application for patent and the conducting of the proceedings in the Patent Office to obtain the patent is an undertaking requiring knowledge of patent law and Patent Office practice as well as knowledge of the scientific or technical matters involved in the particular invention.

The inventor may prepare his own application and file it in the Patent Office and conduct the proceedings himself, but unless he is familiar with these matters or studies them in detail, he may get into considerable difficulty. While a patent may be obtained in many cases by persons not skilled in this work, there would be no assurance that the patent obtained would adequately protect the particular invention.

Most inventors employ the services of persons known as patent attorneys or patent agents. The statute gives the Patent Office the power to make rules and regulations governing the recognition of patent attorneys and agents to practice before the Patent Office, and persons who are not recognized by the Patent Office for this practice are not permitted by law to represent inventors. The Patent Office maintains a register of attorneys and agents. To be admitted to this register, a person must comply with the regulations prescribed by the Office, which now require a showing that the person is of good moral character and of good repute and that he has the legal and scientific and technical quali-

<sup>1</sup> Arranged by subject matter, collection dates from Jan. 2, 1962.

fications necessary to enable him to render applicants for patents valuable service. Provision is made that certain of these qualifications be demonstrated by the passing of an examination. Those admitted to the examination must have a college degree in engineering or science or the equivalent of such a degree. The Patent Office registers both attorneys at law and persons who are not attorneys at law. The former persons are now referred to as "patent attorneys" and the latter persons are referred to as "patent agents." Insofar as the work of preparing an application for patent and conducting the prosecution in the Patent Office is concerned, patent agents are usually just as well qualified as patent attorneys, although patent agents cannot conduct patent litigation in the courts or perform various services which the local jurisdiction considers as practicing law. For example, a patent agent could not draw up a contract relating to a patent, such as an assignment or a license, if the State in which he resides considers drawing contracts as practicing law.

Some patent attorneys and agents formerly advertised their services in magazines, particularly popular magazines of a mechanical or technical nature, and in telephone books. By regulation, registered patent attorneys and agents are now forbidden to advertise for patent business. Some individuals and organizations that are not registered advertise their services in the fields of patent searching and patent promotion. Such individuals and organizations cannot represent inventors before the Patent Office. They are not subject to Patent Office discipline, and the Office cannot assist inventors in dealing with them.

The Patent Office cannot recommend any particular attorney or agent, or aid in the selection of an attorney or agent, as by stating, in response to inquiry that a named patent attorney, agent, or firm is "reliable" or "capable." The Patent Office publishes a list of all registered patent attorneys and agents who have indicated their availability to accept new clients, arranged by states, cities, and foreign countries.

The telephone directories of most large cities have, in the classified section, a heading for patent attorneys under which those in that area are listed. Many large cities have associations of patent attorneys.

In employing a patent attorney or agent, the inventor executes a power of attorney or authorization of agent which must be filed in the Patent Office and is usually a part of the application papers. When an attorney has been appointed, the Office does not communicate with the inventor directly but conducts the correspondence with the attorney since he is acting for the inventor thereafter, although the inventor is free to ask the Patent Office concerning the status of his application. The Patent Office sends two copies of letters to the attorney or agent so that the extra copy may be sent by the attorney or agent to the inventor for his information. The inventor may remove the attorney or agent by revoking the power or authorization. See form 8, page 38.

The Patent Office has the power to disbar, or suspend from practicing before it, persons guilty of gross misconduct, etc., but this can only be done after a full hearing with the presentation of evidence concerning the misconduct. The Patent Office will receive and, in appropriate cases, act upon complaints against attorneys and agents. The fees charged to inventors

by patent attorneys and agents for their professional services are not subject to regulation by the Patent Office. Definite evidence of overcharging may afford basis for Patent Office action, but the Office rarely intervenes in disputes concerning fees.

## WHO MAY APPLY FOR A PATENT

According to the statute, only the inventor may apply for a patent, with certain exceptions. If a person who is not the inventor should apply for a patent, the patent, if it were obtained, would be void. The person applying in such a case would also be subject to criminal penalties for committing perjury. If the inventor is dead, the application may be made by his legal representatives, that is, the administrator or executor of his estate, in his place. If the inventor is insane, the application for patent may be made by his guardian, in his place.

If two or more persons make an invention jointly, they apply for a patent as joint inventors. A person who makes a financial contribution is not a joint inventor and cannot be joined in the application as an inventor. It is possible to correct an innocent mistake in omitting a joint inventor or in erroneously joining a person as inventor.

## APPLICATION FOR PATENT

The application for patent is made to the Commissioner of Patents and includes:

- (1) A written document which comprises a petition, a specification (description and claims), and an oath or declaration;
- (2) A drawing in those cases in which a drawing is possible; and
- (3) The Government filing fee of \$30 (plus an additional \$1 for each claim in excess of 20).

The petition, specification, and oath or declaration must be in the English language and must be legibly written in permanent black ink on one side of the paper. The Office prefers typewriting on legal size paper, 8 to 8½ by 12½ to 13 inches, double spaced, with margins of 1½ inches on the left-hand side and at the top. If the papers filed are not correctly, legibly, and clearly written, the Patent Office may require typewritten or printed papers.

The application for patent is not accepted and placed upon the files for examination until all its required parts, complying with the rules relating thereto, are received, except that certain minor informalities are waived subject to correction when required.

If the papers and parts are incomplete, or so defective that they cannot be accepted as a complete application for examination, the applicant will be notified: the papers will be held for six months for completion and, if not by then completed, will thereafter be returned or otherwise disposed

of. The filing fee may be refunded when an application is refused acceptance as incomplete.

It is desirable that all parts of the complete application be deposited in the Office together; otherwise each part must be signed and a letter must accompany each part, accurately and clearly connecting it with the other parts of the application.

Complete applications are numbered in regular order, and the applicant is informed of the serial number and filing date of the application by a filing receipt. The filing date of the application is the date on which a complete and acceptable application is received in the Patent Office; or the date on which the last part completing such application is received in the case of a previously incomplete or defective application.

### *Petition, Oath or Declaration, Signature*

The petition amounts to the request for a patent and may follow various forms which are given in the list of forms printed at the end of this pamphlet. Ordinarily the power of attorney or authorization of agent is included in the petition, but this may be a separate paper.

The oath or declaration of the applicant is required by statute. The inventor must make an oath or declaration that he believes himself to be the original and first inventor of the subject matter of the application, and he must make various other allegations required by the statute and various allegations required by the Patent Office rules. The form of oath in the usual case is given in the list of forms. The oath must be sworn to by the inventor before a notary public or other officer authorized to administer oaths. A declaration may be used in lieu of an oath as part of the original application for a patent involving designs, plants, and other patentable inventions; for reissue patents; when claiming matter originally shown or described but not originally claimed; or when filing a divisional or continuing application. An illustrative form (11) to use in the original application is given in the list of forms and illustrative declaration forms for other uses are found in the Rules of Practice in Patent Cases (Title 37 of the Code of Federal Regulations) as amended (29 F.R. 18502-18506, Dec. 29, 1964).

The application must be signed by the inventor in person. The full name is required, including the full first name without abbreviation and the middle initial or name, if any. The post-office address of the inventor himself is also required. It is ordinarily included in the petition.

Blank forms for applications or other papers are not supplied by the Patent Office. Some specimen forms are given at the end of this pamphlet.

The papers in a complete application will not be returned for any purpose whatever, nor will the filing fee be returned. If applicants have not preserved copies of the papers, the Office will furnish copies at the usual cost.

### **SPECIFICATION (DESCRIPTION AND CLAIMS)**

The specification must include a written description of the invention and of the manner and process of making and using it, and is required to be in such full, clear, concise, and exact terms as to enable any person skilled in the art to which the invention pertains, or with which it is most nearly connected, to make and use the same.

The specification must set forth the precise invention for which a patent is solicited, in such manner as to distinguish it from other inventions and from what is old. It must describe completely a specific embodiment of the process, machine, manufacture, composition of matter or improvements invented, and must explain the mode of operation or principle whenever applicable. The best mode contemplated by the inventor of carrying out his invention must be set forth.

In the case of an improvement, the specification must particularly point out the part or parts of the process, machine, manufacture, or composition of matter to which the improvement relates, and the description should be confined to the specific improvement and to such parts as necessarily co-operate with it or as may be necessary to a complete understanding or description of it.

A brief summary of the invention indicating its nature and substance, which may include a statement of the object of the invention, should precede the detailed description. Such summary should, when set forth, be commensurate with the invention as claimed and any object recited should be that of the invention as claimed.

When there are drawings, there shall be a brief description of the several views of the drawings, and the detailed description of the invention shall refer to the different views by specifying the numbers of the figures, and to the different parts by use of reference letters or numerals (preferably the latter).

The specification must conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

When more than one claim is presented, they may be placed in dependent form in which a claim may refer back to and further restrict a single preceding claim.

The claim or claims must conform to the invention as set forth in the remainder of the specification and the terms and phrases used in the claims must find clear support or antecedent basis in the description so that the meaning of the terms in the claims may be ascertainable by reference to the description.

The claims are brief descriptions of the subject matter of the invention, eliminating unnecessary details and reciting all essential features necessary to distinguish the invention from what is old. The claims are the operative part of the patent. Novelty and patentability are judged by the claims, and, when a patent is granted, questions of infringement are judged by the courts on the basis of the claims.

The following order of arrangement should be observed in framing the specification:

- (a) Title of the invention; or a preamble stating the name, citizenship, and residence of the applicant and the title of the invention may be used.
- (b) Brief summary of the invention.
- (c) Brief description of the several views of the drawing, if there are drawings.
- (d) Detailed description.
- (e) Claim or claims.

## DRAWING

A drawing is required by the statute in all cases which admit of drawings. This includes practically all inventions except compositions of matter or processes, but a drawing may also be useful in the case of many processes.

The drawing may be signed by the inventor himself or it may be signed by the attorney or agent for the inventor (but note that the signature to the written part of the application must be that of the inventor himself and cannot be signed by anyone else).

The drawing must show every feature of the invention specified in the claims and is required by the Office rules to be in a particular form. The Office specifies the size of the sheet on which the drawing is made, the type of paper, the margins, and other details relating to the making of the drawing. The reason for specifying the standards in detail is that the drawings are printed and published in a uniform style when the patent issues, and the drawings must also be such that they can be readily understood by persons using the patent descriptions.

The following is the rule relating to the standards for drawings:

84. *Standards for drawings.*—The complete drawing is printed and published when the patent issues, and a copy is attached to the patent. This work is done by the photolithographic process, the sheets of drawings being reduced about one-third in size. In addition, a reduction of a selected portion of the drawings of each application is published in the Official Gazette. It is therefore necessary for these and other reasons that the character of each drawing be brought as nearly as possible to a uniform standard of execution and excellence, suited to the requirements of the reproduction process and of the use of the drawings, to give the best results in the interests of inventors, of the Office, and of the public. The following regulations with respect to drawings are accordingly prescribed:

(a) *Paper and ink.*—Drawings must be made upon pure white paper of a thickness corresponding to two-ply or three-ply Bristol board. The surface of the paper must be calendared and smooth and of a quality which will permit erasure and correction. India ink alone must be used for pen drawings to secure perfectly black solid lines. The use of white pigment to cover lines is not acceptable.

(b) *Size of sheet and margins.*—The size of a sheet on which a drawing is made must be exactly 10 by 15 inches. One inch from its edges a single marginal line is to be drawn, leaving the "sight" precisely 8 by 13 inches. Within this margin all work must be included. One of the shorter sides of the sheet is regarded as its top, and, measuring down from the marginal line, a space of not less than  $1\frac{1}{4}$  inches is to be left blank for the heading of title, name, number, and date, which will be applied subsequently by the Office in a uniform style.

(c) *Character of lines.*—All drawings must be made with drafting instruments or by photolithographic process which will give them satisfactory reproduction characteristics. Every line and letter (signatures included) must be absolutely black. This direction applies to all lines however fine, to shading, and to lines representing cut surfaces in sectional views. All lines must be clean, sharp, and solid, and fine or crowded lines should be avoided. Solid black should not be used for sectional or surface shading. Freehand work should be avoided wherever it is possible to do so.

(d) *Hatching and shading.*—Hatching should be made by oblique parallel lines, which may be not less than about one-twentieth inch apart.

Heavy lines on the shade side of objects should be used except where they tend to thicken the work and obscure reference characters. The light should come from the upper left-hand corner at an angle of  $45^\circ$ . Surface delineations should be shown by proper shading, which should be open.

(e) *Scale.*—The scale to which a drawing is made ought to be large enough to show the mechanism without crowding when the drawing is reduced in reproduction,

and views of portions of the mechanism on a larger scale should be used when necessary to show details clearly; two or more sheets should be used if one does not give sufficient room to accomplish this end, but the number of sheets should not be more than is necessary.

(f) *Reference characters.*—The different views should be consecutively numbered figures. Reference numerals (and letters, but numerals are preferred) must be plain, legible, and carefully formed, and not be encircled. They should, if possible, measure at least one-eighth of an inch in height so that they may bear reduction to one twenty-fourth of an inch; and they may be slightly larger when there is sufficient room. They must not be so placed in the close and complex parts of the drawing as to interfere with a thorough comprehension of the same, and therefore should rarely cross or mingle with the lines. When necessarily grouped around a certain part, they should be placed at a little distance, at the closest point where there is available space, and connected by lines with the parts to which they refer. They should not be placed upon hatched or shaded surfaces but when necessary, a blank space may be left in the hatching or shading where the character occurs so that it shall appear perfectly distinct and separate from the work. The same part of an invention appearing in more than one view of the drawing must always be designated by the same character, and the same character must never be used to designate different parts.

(g) *Symbols, legends.*—Graphical drawing symbols for conventional elements may be used when appropriate, subject to approval by the Office. The elements for which such symbols are used must be adequately identified in the specification. While descriptive matter on drawings is not permitted, suitable legends may be used, or may be required, in proper cases, as in diagrammatic views and flow sheets or to show materials. Arrows may be required, in proper cases, to show direction of movement. The lettering should be as large as, or larger than, the reference characters.

(h) *Location of signature and names.*—The signature of the applicant or the name of the applicant and signature of the attorney or agent, may be placed in the lower right-hand corner of each sheet within the marginal line, or may be placed below the lower marginal line.

(i) *Views.*—The drawing must contain as many figures as may be necessary to show the invention; the figures should be consecutively numbered if possible, in the order in which they appear. The figures may be plan, elevation, section, or perspective views, and detail views of portions or elements, on a larger scale if necessary may also be used. Exploded views, with the separated parts of the same figure embraced by a bracket, to show the relationship or order of assembly of various parts are permissible. When necessary, a view of a large machine or device in its entirety may be broken and extended over several sheets if there is no loss in facility of understanding the view (the different parts should be identified by the same figure number but followed by the letters a, b, c, etc., for each part). The plane upon which a sectional view is taken should be indicated on the general view by a broken line, the ends of which should be designated by numerals corresponding to the figure number of the sectional view and have arrows applied to indicate the direction in which the view is taken. A moved position may be shown by a broken line superimposed upon a suitable figure if this can be done without crowding, otherwise a separate figure must be used for this purpose. Modified forms of construction can only be shown in separate figures. Views should not be connected by projection lines nor should center lines be used.

(j) *Arrangement of views.*—All views on the same sheet must stand in the same direction and should, if possible, stand so that they can be read with the sheet held in an upright position. If views longer than the width of the sheet are necessary for the clearest illustration of the invention, the sheet may be turned on its side. The space for a heading must then be reserved at the right and the signatures placed at the left, occupying the same space and position on the sheet as in the upright views and being horizontal when the sheet is held in an upright position. One figure must not be placed upon another or within the outline of another.

(k) *Figure for Official Gazette.*—The drawing should, as far as possible, be so planned that one of the views will be suitable for publication in the Official Gazette as the illustration of the invention.

(l) *Extraneous matter*.—An agent's or attorney's stamp, or address, or other extraneous matter, will not be permitted upon the face of a drawing, within or without the marginal line, except that the title of the invention and identifying indicia, to distinguish from other drawings filed at the same time, may be placed below the lower margin.

(m) *Transmission of drawings*.—Drawings, transmitted to the Office should be sent flat, protected by a sheet of heavy binder's board, or may be rolled for transmission in a suitable mailing tube; but must never be folded. If received creased or mutilated, new drawings will be required.

The requirements relating to drawings are strictly enforced, but a drawing not complying with all of the regulations is accepted for purpose of examination, and correction or a new drawing will be required later.

Applicants are advised to employ competent draftsmen to make their drawings. The Office may furnish drawings at applicant's expense but Office draftsmen are, however, occupied almost full time with corrections to drawings of pending applications, and therefore, cannot undertake the preparation of new drawings, at the present time.

## MODELS. EXHIBITS, SPECIMENS

Models were once required in all cases admitting of a model, as a part of the application, and these models became a part of the record of the patent. Such models are no longer generally required since the description of the invention in the specification, and the drawings, must be sufficiently full and complete, and capable of being understood, to disclose the invention without the aid of a model. A model will not be admitted unless specifically called for.

A model, working model, or other physical exhibit, may be required by the Office if deemed necessary for any purpose on examination of the application. This is not done very often. A working model will be called for in the case of applications for patent for alleged perpetual motion devices.

When the invention relates to a composition of matter, the applicant may be required to furnish specimens of the composition, or of its ingredients or intermediates, for inspection or experiment.

## EXAMINATION OF APPLICATIONS AND PROCEEDINGS IN THE PATENT OFFICE

Applications filed in the Patent Office and accepted as complete applications are assigned for examination to the respective examining groups having charge of the classes of inventions to which the applications relate. In the examining group applications are taken up for examination by the examiner to whom they have been assigned in the order in which they have been filed or in accordance with examining procedures established by the Commissioner.

Applications will not be advanced out of turn for examination or for further action except as provided by the rules, or upon order of the Commissioner to expedite the business of the Office, or upon a verified showing which, in the opinion of the Commissioner, will justify so advancing it.

The examination of the application consists of a study of the application for compliance with the legal requirements and a search through the prior art represented by prior United States patents, prior foreign patents which are available in the United States Patent Office, and such prior literature as may be available, to see if the invention is new. A decision is reached by the examiner in the light of the study and the result of the search as to compliance with the statutes and rules and as to the novelty of the invention as claimed, as well as to formal matters. The examination is ordinarily complete with respect both to compliance of the application with the statute and rules and to the patentability of the invention as claimed, as well as with respect to matters of form, unless otherwise indicated.

### *Office Action*

The applicant is notified in writing of the examiner's decision by an "action" which is mailed to the attorney or agent. The reasons for any adverse action or any objection or requirement are stated in the action and such information or references are given as may be useful in aiding the applicant to judge of the propriety of continuing the prosecution of his application.

The examiner's action will be complete as to all matters, except that in appropriate circumstances, such as misjoinder of invention, fundamental defects in the application, and the like, the action of the examiner may be limited to such matters before further action is made. However, matters of form need not be raised by the examiner until a claim is found allowable.

If the invention is not considered patentable, or not considered patentable as claimed, the claims, or those considered unpatentable, will be rejected. If the examiner finds that the invention as defined by the claims is not new, the claims are refused. The claims may also be refused if they differ somewhat from what is found to be old but the difference is not considered sufficient to justify a patent. It is not uncommon for some or all of the claims to be rejected on the first action by the examiner; relatively few applications are allowed as filed.

Terms such as "anticipation," "fully met," "lack of novelty," etc., are used if the invention as claimed is not new, while terms such as "unpatentable over -----," "lacking invention over -----," etc., may be used if the differences over what is old are not considered sufficient to justify a patent.

In rejecting claims for want of novelty or for want of invention, the examiner cites the best references at his command. The pertinence of each reference, if not obvious, is explained and each rejected claim specified.

### *Applicant's Response*

After the Office action, if adverse in any respect, the applicant, if he persists in his application for a patent, must reply thereto within the time

allowed, and may request reexamination or reconsideration, with or without amendment.

In order to be entitled to reexamination or reconsideration, the applicant must make request therefor in writing, and he must distinctly and specifically point out the supposed errors in the examiner's action; the applicant must respond to every ground of objection and rejection in the prior Office action (except that request may be made that objections or requirements as to form not necessary to further consideration of the claims be held in abeyance until a claim is allowed), and the applicant's action must appear throughout to be a bona fide attempt to advance the case to final action. The mere allegation that the examiner has erred will not be received as a proper reason for such reexamination or reconsideration.

In amending an application in response to a rejection, the applicant must clearly point out the patentable novelty which he thinks the claims present in view of the state of the art disclosed by the references cited or the objections made. He must also show how the amendments avoid such references or objections.

After response by applicant the application will be reexamined and reconsidered, and the applicant will be notified if claims are rejected, or objections or requirements made, in the same manner as after the first examination. The applicant may respond to such Office action, in the same manner, with or without further amendment, and the application will be again considered, unless the examiner has indicated that the action is final.

### *Final Rejection*

On the second or any subsequent examination or consideration, the rejection or other action may be made final, whereupon applicant's response is limited to appeal in the case of rejection of any claim and further amendment is restricted. Petition may be taken to the Commissioner in the case of objections or requirements not involved in the rejection of any claim. Response to a final rejection or action must include cancellation of, or appeal from the rejection of, each claim so rejected and, if any claim stands allowed, compliance with any requirement or objection as to form.

In making such final rejection, the examiner repeats or states all grounds of rejection then considered applicable to the claims in the case.

Interviews with examiners may be arranged, but an interview does not remove the necessity for response to Office actions within the required time, and the action of the Office is based solely on the written record.

If two or more inventions are claimed in a single application, and are regarded by the Patent Office to be of such a nature that a single patent may not be issued for both of them, the applicant will be required to limit the application to but one of the inventions. The other invention may be made the subject of a separate application which, if filed while the first application is still pending, will be entitled to the benefit of the filing date of the first application. A requirement to restrict the application to one invention may be made before further action by the examiner.

As a result of the examination by the Patent Office, patents are granted in the case of about four out of every seven applications for patents which are filed.

## AMENDMENTS TO APPLICATION

The preceding section referred to amendments to the application. Following are some details concerning amendments:

The applicant may amend before or after the first examination and action, and also after the second or subsequent examination or reconsideration as specified in the rules, or when and as specifically required by the examiner.

After final rejection or action amendments may be made canceling claims or complying with any requirement of form which has been made, and amendments presenting rejected claims in better form for consideration on appeal may be admitted; but the admission of any such amendment or its refusal, and any proceedings relative thereto, shall not operate to relieve the application from its condition as subject to appeal or to save it from abandonment.

If amendments touching the merits of the application be presented after final rejection, or after appeal has been taken, or when such amendment might not otherwise be proper, they may be admitted upon a showing of good and sufficient reasons why they are necessary and were not earlier presented.

No amendment can be made as a matter of right in appealed cases. After decision on appeal, amendments can only be made as provided in the rules.

The specification, claims, and drawing must be amended and revised when required, to correct inaccuracies of description and definition or unnecessary prolixity, and to secure correspondence between the claims, the description, and the drawing.

All amendments of the drawings or specifications, and all additions thereto, must conform to at least one of them as it was at the time of the filing of the application. Matter not found in either, involving a departure from or an addition to the original disclosure, cannot be added to the application even though supported by a supplemental oath, and can be shown or claimed only in a separate application.

The claims may be amended by canceling particular claims, by presenting new claims, or by amending the language of particular claims (such amended claims being in effect new claims). In presenting new or amended claims, the applicant must point out how they avoid any reference or ground of rejection of record which may be pertinent.

Erasures, additions, insertions, or alterations of the papers and records must not be made by the applicant. Amendments are made by filing a paper, directing or requesting that specified changes or additions be made. The exact word or words to be stricken out or inserted in the application must be specified and the precise point indicated where the deletion or insertion is to be made.

Amendments are "entered" by the Office by making the proposed deletions by drawing a line in red ink through the word or words canceled and by making the proposed substitutions or insertions in red ink, small insertions being written in at the designated place and larger insertions being indicated by reference.

No change in the drawing may be made except by permission of the Office. Permissible changes in the construction shown in any drawing may be made only by the Office. A sketch in permanent ink showing proposed changes, to become part of the record, must be filed. The paper requesting amendments to the drawing should be separate from other papers. The drawing may not be withdrawn from the Office except for signature.

Substitute drawings will not ordinarily be admitted in any case unless required by the Office.

If the number or nature of the amendments render it difficult to consider the case, or to arrange the papers for printing or copying, the examiner may require the entire

specification or claims, or any part thereof, to be rewritten. A substitute specification will ordinarily not be accepted unless it has been required by the examiner.

The original numbering of the claims must be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When claims are added by amendment or substituted for canceled claims, they must be numbered by the applicant consecutively beginning with the number next following the highest numbered claim previously presented. When the application is ready for allowance, the examiner, if necessary, will renumber the claims consecutively in the order in which they appear or in such order as may have been requested by applicant.

## TIME FOR RESPONSE AND ABANDONMENT

The response of an applicant to an action by the Office must be made within a prescribed time limit. This time limit is set at 6 months by the statute. If no response is received within the 6 months, the application is considered as abandoned and no longer pending. However, if it can be shown that the failure to prosecute was unavoidable, the application may be revived by the Commissioner. This revival requires a petition to the Commissioner, accompanied by a verified showing of the cause of the delay and a fee for the petition, which should be filed without delay. The proper response must also accompany the petition if it has not yet been filed.

The statute also provides that the Commissioner may shorten the time for reply to not less than 30 days. If no reply is received within the shortened time period, the application is similarly considered as abandoned.

## APPEAL TO THE BOARD OF APPEALS AND TO THE COURT

If the examiner persists in his rejection of any of the claims in an application, or if the rejection has been made final, the applicant may appeal to the Board of Appeals in the Patent Office. The Board of Appeals consists of the Commissioner of Patents, the Assistant Commissioners, and not more than fifteen examiners-in-chief, but normally each appeal is heard by only three members. An appeal fee is required and the applicant must file a brief to support his position. He is entitled to an oral hearing if he desires one.

If the decision of the Board of Appeals is still adverse to the applicant, he has a choice of appealing to the Court of Customs and Patent Appeals or of filing a civil action against the Commissioner of Patents in the United States District Court for the District of Columbia. The court in the appeal will review the record made in the Patent Office and may affirm or reverse the action taken by the Patent Office. In the civil action, the applicant may present testimony in the court, and the court will make a decision holding that he either is or is not entitled to the patent.

## INTERFERENCES

Occasionally two or more applications are filed by different inventors claiming substantially the same patentable invention. The patent can only be granted to one of them, and a proceeding known as an "interference" is instituted by the Patent Office to determine who is the first inventor and entitled to the patent. About 1 percent of the applications filed become involved in an interference proceeding. Interference proceedings may also be instituted between an application and a patent already issued, provided the patent has not been issued for more than 1 year prior to the filing of the conflicting application, and provided that the conflicting application is not barred from being patentable for some other reason.

Each party to such a proceeding must submit evidence of facts proving when he made the invention. In view of the necessity of proving the various facts and circumstances concerning the making of the invention during an interference, inventors must be able to produce evidence to do this. If no evidence is submitted a party is restricted to the date of filing his application as his earliest date. The priority question is determined by a board of three interference examiners on the evidence submitted. From the decision of the Board of Patent Interferences, the losing party may appeal to the Court of Customs and Patent Appeals or file a civil action against the winning party in the appropriate United States district court.

The terms "conception of the invention" and "reduction to practice" are encountered in connection with priority questions. Conception of the invention refers to the completion of the devising of the means for accomplishing the result. Reduction to practice refers to the actual construction of the invention in physical form; in the case of a machine it includes the actual building of the machine, in the case of an article or composition it includes the actual making of the article or composition, in the case of a process it includes the actual carrying out of the steps of the process; and actual operation, demonstration, or testing for the intended use is also usually necessary. The filing of a regular application for patent competently disclosing the invention is treated as equivalent to reduction to practice. The inventor who proves to be the first to conceive the invention and the first to reduce it to practice will be held to be the prior inventor, but more complicated situations cannot be stated this simply.

## ALLOWANCE AND ISSUE OF PATENT

If on the examination of the application, or at a later stage during the reexamination or reconsideration of the application, the patent application is found to be allowable, the applicant is sent a notice of allowance, and a fee for issuing the patent is due within 6 months from the date of the notice. This fee is \$30, and \$1 for each claim in excess of 20. If the final fee is not paid, the application becomes "forfeited" and is abandoned, but a provision is made in the statute whereby the Commissioner may accept the fee late, up to 1 year, on a showing of unavoidable delay. When the final fee is paid, the patent ordinarily issues within five to seven weeks after the date

of the payment, and the patent grant is delivered or mailed on the day of its grant to the inventor's attorney or agent if there is one of record, otherwise directly to the inventor.

On the date of the grant, printed copies of the specification and drawing are available for sale and the record of the patent in the Patent Office becomes open to the public.

In case the publication of an invention by the granting of a patent would be detrimental to the national defense, the patent law gives the Commissioner of Patents the power to withhold the grant of the patent and to order the invention kept secret for such period of time as the national interest requires.

## NATURE OF PATENT AND PATENT RIGHTS

The patent is issued in the name of the United States under the seal of the Patent Office, and is either signed by the Commissioner of Patents or has his name written thereon and attested by an official of the Patent Office. The patent contains a grant to the patentee and a printed copy of the specification and drawing is annexed to the patent and forms a part of it. The grant to the patentee is of "the right to exclude others from making, using or selling the invention throughout the United States" for the term of 17 years. The United States in this phrase includes Territories and possessions.

The exact nature of the right conferred must be carefully distinguished, and the key is in the words "right to exclude" in the phrase just quoted. The patent does not grant the right to make, use, or sell the invention but only grants the exclusive nature of the right. Any person is ordinarily free to make, use, or sell anything he pleases, and a grant from the Government is not necessary. The patent only grants the right to exclude others from making, using, or selling the invention. Since the patent does not grant the right to make, use, or sell the invention, the patentee's own right to do so is dependent upon the rights of others and whatever general laws might be applicable. A patentee, merely because he has received a patent for an invention, is not thereby authorized to make, use, or sell the invention if doing so would violate any law. An inventor of a new automobile would not be entitled to use his new automobile in violation of the laws of a State requiring a license, because he has obtained a patent, nor may a patentee sell an article the sale of which may be forbidden by a law, merely because he has obtained a patent. Neither may a patentee make, use or sell his own invention if doing so would infringe the prior rights of others. A patentee may not violate the Federal antitrust laws, such as by resale price agreements or entering into combinations in restraint of trade, or the pure food and drug laws, by virtue of his having a patent. Ordinarily there is nothing which prohibits a patentee from making, using, or selling his own invention.

Since the essence of the right granted by a patent is the right to exclude others from commercial exploitation of the invention, the patentee is the

only one who may make, use, or sell his invention. Others may not do so without authorization from the patentee. The patentee may manufacture and sell the invention himself or he may license, that is, give authorization to others to do so.

The term of a patent is 17 years. After the patent has expired anyone may make, use, or sell the invention without permission of the patentee, provided that matter covered by other unexpired patents is not used. The term may not be extended except by special act of Congress. Provision was made by a law which has now expired for granting extensions of patents owned by veterans of World War II.

## CORRECTION OF PATENTS

Once the patent is granted, it is outside of the jurisdiction of the Patent Office except in a few respects.

The Patent Office may issue without charge a certificate correcting a clerical error it has made in the patent when the patent does not correspond to the record in the Patent Office. These are mostly corrections of typographical errors made in printing.

Some minor errors of a typographical nature made by the applicant may be corrected by a certificate of correction for which a charge is made.

The patentee may disclaim one or more claims of his patent by filing in the Patent Office a disclaimer as provided by the statute.

When the patent is defective in various respects, the law provides that the patentee may apply for a reissue patent. This is a patent granted to replace the first one and is granted only for the balance of the unexpired term. However, the nature of the changes that can be made by means of the reissue are rather limited; new matter cannot be added.

## ASSIGNMENTS AND LICENSES

A patent is personal property and may be sold to others or mortgaged; it may be bequeathed by a will, and it may pass to the heirs of a deceased patentee. The patent law provides for the transfer or sale of a patent, or of an application for patent, by an instrument in writing. Such an instrument is referred to as an assignment and may transfer the entire interest in the patent. The assignee, when the patent is assigned to him, becomes the owner of the patent and he has the same rights that the original patentee had.

The statute also provides for the assignment of a part interest, that is, a half interest, a fourth interest, etc., in a patent. There may also be a grant which conveys the same character of interest as an assignment but only for a particular specified part of the United States.

A mortgage of patent property passes ownership thereof to the mortgagee or lender until the mortgage has been satisfied and a retransfer from the mortgagee back to the mortgagor, the borrower, is made. A conditional

assignment also passes ownership of the patent and is regarded as absolute until canceled by the parties or by the decree of a competent court.

An assignment, grant, or conveyance of any patent or application for patent should be acknowledged before a notary public or officer authorized to administer oaths or perform notarial acts. The certificate of such acknowledgement constitutes prima facie evidence of the execution of the assignment, grant, or conveyance.

### *Recording of Assignments*

The Patent Office records assignments, grants and similar instruments sent to it for recording and the recording serves as notice. If an assignment, grant, or conveyance of a patent or an interest in a patent (or an application for patent) is not recorded in the Patent Office within 3 months from its date, it is void against a subsequent purchaser for a valuable consideration without notice, unless it is recorded prior to the subsequent purchase.

An instrument relating to a patent should identify the patent by number and date (the name of the inventor and title of the invention as stated in the patent should also be given). An instrument relating to an application should identify the application by its serial number and date of filing, and the name of the inventor and title of the invention as stated in the application should also be given. Sometimes an assignment of an application is executed at the same time that the application is prepared and before it has been filed in the Patent Office. Such assignment should adequately identify the application, as by its date of execution and name of the inventor and title of the invention, so that there can be no mistake as to the application intended.

If an application has been assigned and the assignment is recorded, on or before the date the final fee is paid, the patent will be issued to the assignee as owner. If the assignment is of a part interest only, the patent will be issued to the inventor and assignee as joint owners.

### *Joint Ownership*

Patents may be owned jointly by two or more persons as in the case of a patent granted to joint inventors, or in the case of the assignment of a part interest in a patent. Any joint owner of a patent, no matter how small his part interest, may make, use, and sell the invention for his own profit, without regard to the other owner, and may sell his interest or any part of it, or grant licenses to others, without regard to the other joint owner, unless the joint owners have made a contract governing their relation to each other. It is accordingly dangerous to assign a part interest without a definite agreement between the parties as to the extent of their respective rights and their obligations to each other if the above result is to be avoided.

The owner of a patent may grant licenses to others. Since the patentee has the right to exclude others from making, using or selling the invention, no one else may do any of these things without his permission. A license is the permission granted by the patent owner to another to make, use, or

sell the invention. No particular form of license is required; a license is a contract and may include whatever provisions the parties agree upon, including the payment of royalties, etc.

The drawing up of a license agreement (as well as assignments) is within the field of an attorney at law, although such attorney should be familiar with patent matters as well. A few States have prescribed certain formalities to be observed in connection with the sale of patent rights.

## INFRINGEMENT OF PATENTS

Infringement of a patent consists in the unauthorized making, using, or selling of the patented invention within the territory of the United States, during the term of the patent. If a patent is infringed, the patentee may sue for relief in the appropriate Federal court. He may ask the court for an injunction to prevent the continuation of the infringement, and he may also ask the court for an award of damages because of the infringement. In such an infringement suit, the defendant may raise the question of the validity of the patent, which is then decided by the court. The defendant may also aver that what he is doing, does not constitute infringement. Infringement is determined primarily by the language of the claims of the patent and, if what the defendant is making does not fall within the language of any of the claims of the patent, he does not infringe.

Suits for infringement of patents follow the rules of procedure of the Federal courts. From the decision of the district court, there is an appeal to the appropriate Federal court of appeals. The Supreme Court may thereafter take a case by writ of certiorari. If the United States Government infringes a patent, the patentee has a remedy for damages in the Court of Claims of the United States. The Government may use any patented invention without permission of the patentee, but the patentee is entitled to obtain compensation for the use by or for the Government.

If the patentee notifies anyone that he is infringing his patent or threatens suit, the one charged with infringement may himself start the suit in a Federal court and get a judgment on the matter.

The Patent Office has no jurisdiction over questions relating to infringement of patents. In examining applications for patent no determination is made as to whether the invention sought to be patented infringes any prior patent. An improvement invention may be patentable, but it might infringe a prior unexpired patent for the invention improved upon, if there is one.

## PATENT MARKING AND "PATENT PENDING"

A patentee who makes or sells patented articles, or a person who does so under him, is required to mark the articles with the word "Patent" and the number of the patent. The penalty for failure to mark is that the patentee may not recover damages from an infringer unless the infringer

was duly notified of the infringement and continued to infringe after the notice.

The marking of an article as patented when it is not in fact patented is against the law and subjects the offender to a penalty.

Some persons mark articles sold with the terms "Patent Applied For" or "Patent Pending." These phrases have no legal effect, but only give information that an application for patent has been filed in the Patent Office. The protection afforded by a patent does not start until the actual grant of the patent. False use of these phrases or their equivalents is prohibited.

## DESIGN PATENTS

The patent laws provide for the granting of design patents to any person who has invented any new, original and ornamental design for an article of manufacture. The design patent protects only the appearance of an article, and not its structure or utilitarian features. The proceedings relating to granting of design patents are the same as those relating to other patents with a few differences. A design patent may be granted for the term of 3½ years, or for 7 years, or for 14 years, as the applicant may elect. The fee for each of the three terms is different. If the applicant requests a design patent for one of the shorter terms, he is permitted to change his application to one of the longer terms at any time before the application is allowed upon payment of the balance of the fee required.

The drawing of the design patent conforms to the same rules as other drawings, but no reference characters are required.

The specification of a design application is short and ordinarily follows a set form. Only one claim is permitted, following a set form.

## PLANT PATENTS

The law also provides for the granting of a patent to anyone who has invented or discovered and asexually reproduced any distinct and new variety of plant, including cultivated sports, mutants, hybrids, and newly found seedings, other than a tuber-propagated plant or a plant found in an uncultivated state.

Asexually propagated plants are those that are reproduced by means other than from seeds, such as by the rooting of cuttings, by layering, budding, grafting, inarching, etc.

With reference to tuber-propagated plants, for which a plant patent cannot be obtained, the term "tuber" is used in its narrow horticultural sense as meaning a short, thickened portion of an underground branch. Such plants covered by the term "tuber-propagated" are the Irish potato and the Jerusalem artichoke. This exception is made because this group alone, among asexually reproduced plants, is propagated by the same part of the plant that is sold as food.

An application for a plant patent consists of the same parts as other applications.

The application papers for a plant patent must be filed in duplicate (to provide an original and duplicate file) but only one need be signed and executed: the second copy may be a legible carbon copy of the original. The reason for thus providing an original and duplicate file is that the duplicate file is utilized for submission to the Agricultural Research Service, Department of Agriculture for a report on the plant variety, the original file being retained in the Patent Office at all times.

The specification should include a complete detailed description of the plant and the characteristics thereof that distinguish the same over related known varieties, and its antecedents, expressed in botanical terms in the general form followed in standard botanical text books or publications dealing with the varieties of the kind of plant involved (evergreen tree, dahlia plant, rose plant, apple tree, etc.), rather than a mere broad non-botanical characterization such as commonly found in nursery or seed catalogs. The specification should also include the origin or parentage of the plant variety sought to be patented and must particularly point out where and in what manner the variety of plant has been asexually reproduced. Where color is a distinctive feature of the plant the color should be positively identified in the specification by reference to a designated color as given by a recognized color dictionary. Where the plant variety originated as a newly found seedling, the specification must fully describe the conditions (cultivation, environment, etc.) under which the seedling was found growing to establish that it was not found in an uncultivated state.

A plant patent is granted on the entire plant. It therefore follows that only one claim is necessary and only one is permitted.

The oath or declaration required of the applicant in addition to the averments required for other patents must include the averment that the applicant has asexually reproduced the new plant variety.

Plant patent drawings are not mechanical drawings and should be artistically and competently executed. The drawing must disclose all the distinctive characteristics of the plant capable of visual representation. When color is a distinguishing characteristic of the new variety, the drawing must be in color. Two duplicate copies of color drawings must be submitted. Color drawings may be made either in permanent water color or oil, or in lieu thereof may be photographs made by color photography or properly colored on sensitized paper. The paper in any case must correspond in size, weight, and quality to the paper required for other drawings. Mounted photographs are not acceptable.

Specimens of the plant variety, its flower or fruit, should not be submitted unless specifically called for by the examiner.

All inquiries relating to plant patents should be directed to the Patent Office and not to the Department of Agriculture.

The Patent Office cannot respond to inquiries concerning the botanical aspects of plant varieties regarding such matters, for example, as growth, reproduction, cultivation and breeding, nor respond to inquiries as to whether a plant variety designated by its trade name has been patented, and if so, to whom.

The proceedings relating to plant patents are the same as those relating to other patents (not design patents) with a few variations.

Responsive papers to any action in a plant patent application should be in duplicate, and only one need be signed.

## FOREIGN PATENTS

Since the rights granted by a United States patent extend only throughout the territory of the United States and have no effect in a foreign country, an inventor who wishes patent protection in other countries must apply for a patent in the other countries. Almost every country has its own patent law, and a person desiring a patent in a particular country must make an application for patent in that country, in accordance with the requirements of that country.

The laws of many countries differ in various respects from the patent law of the United States and even from each other. In most foreign countries, publication of the invention before the date of the application will bar the right to a patent. In most foreign countries, a series of fees are due after the grant of the patent. These fees are usually annual and increase in amount each year. Most foreign countries require that the patented invention must be manufactured in that country after a certain period, usually 3 years. If there is no manufacture within this period in some countries, the patent may be void, while in most countries the patent may be subject to the grant of compulsory licenses to any other person who may apply for a license.

There is a treaty relating to patents to which over sixty countries have subscribed, which provides that each country guarantees to the citizens of the other countries the same rights in patent matters that it gives to its own citizens. This treaty also provides that if an application for patent is filed in one of the countries and then an application is filed in a second country within 1 year from the first, the second application will be given the benefit of the filing date of the first application. This is known as the right of priority. Thus one who files an application for patent in the United States, and then files in one of these countries within 12 months, is credited with his United States filing date in the foreign country.

The Patent Office cannot assist in the filing of applications for patents in foreign countries. A number of patent attorneys specialize in obtaining patents in foreign countries for American clients. In general, an inventor should be satisfied that he could make some profit from foreign patents or that there is some particular reason for obtaining them, before he attempts to apply for foreign patents.

Under United States law it is necessary, in the case of inventions made in the United States, to obtain a license from the Commissioner of Patents before applying for a patent in a foreign country, in certain cases. Such a license is required if the foreign application is to be filed before an application is filed in the United States or before the expiration of 6 months from the filing of an application in the United States. The request for a license may be a simple letter referring to the United States application if one has already been filed. After 6 months from the United States filing, a license is not required unless the invention has been ordered to

be kept secret. If the invention has been ordered to be kept secret, consent to the filing abroad must be obtained from the Commissioner of Patents during the period the order of secrecy is in effect.

## FOREIGN APPLICANTS FOR UNITED STATES PATENTS

The patent laws of the United States make no discrimination with respect to the citizenship of the inventor. Any inventor, regardless of his citizenship, may apply for a patent on the same basis as an American citizen. There are, however, a number of particular points of special interest to applicants located in foreign countries.

The application for patent in the United States must be made by the inventor and the inventor must sign the papers (with certain exceptions), differing from the law in many countries where the signature of the inventor and an oath of inventorship are not necessary. If the inventor is dead, the application may be made by his executor or administrator, or equivalent, and in the case of mental disability it may be made by his legal representative (guardian).

No United States patent can be obtained if the invention was patented abroad before applying in the United States by the inventor or his legal representatives or assigns on an application filed more than 12 months before filing in the United States. Six months are allowed in the case of a design patent.

An application for patent filed in the United States by any person who has previously regularly filed an application for a patent for the same invention in a foreign country which affords similar privileges to citizens of the United States shall have the same force and effect for the purpose of overcoming intervening acts of others as if filed in the United States on the date on which the application for patent for the same invention was first filed in such foreign country, provided the application in the United States is filed within 12 months (6 months in the case of a design patent) from the earliest date on which any such foreign application was filed. A copy of the foreign application certified by the patent office of the country in which filed is required to secure this right of priority.

If any application for patent has been filed in any foreign country by the applicant or by his legal representatives or assigns prior to his application in the United States, the applicant must, in the oath or declaration accompanying the application, state the country in which the earliest such application has been filed, giving the date of filing the application; and all applications filed more than a year before the filing in the United States must also be recited in the oath or declaration.

An oath or declaration must be made with respect to every application. When the applicant is in a foreign country the oath or affirmation may be made before any diplomatic or consular officer of the United States, or before any officer having an official seal and authorized to administer oaths in the foreign country, whose authority shall be proved by a certificate of a diplomatic or consular officer of the United States, the oath being

attested in all cases by the proper official seal of the officer before whom the oath is made.

When the oath is taken before an officer in the country foreign to the United States all the application papers (except the drawing) must be attached together and a ribbon passed one or more times through all the sheets of the application, and the ends of the ribbon brought together under the seal before the latter is affixed and impressed, or each sheet must be impressed with the official seal of the officer before whom the oath was taken.

If the application is filed by the legal representative (executor, administrator, etc.) of a deceased inventor, the legal representative must make the oath or declaration.

When a declaration is used, the ribboning procedure is not necessary, nor is it necessary to appear before an official in connection with the making of a declaration.

An attorney resident in the United States and specifically familiar with practice in the United States Patent Office should be employed. An attorney not resident in the United States, if on the Patent Office roster of attorneys, may act, and correspondence will be addressed to him unless he appoints an associate in the United States.

## FEES AND PAYMENT

The following fees and charges are payable to the Patent Office:

1. Filing fee. On filing each original application for a patent having 20 claims or less, except in design cases.....	\$30. 00
For each additional claim over 20.....	1. 00
2. Final fee. On issuing each original patent having 20 claims or less, except in design cases.....	30. 00
For each additional claim over 20.....	1. 00
3. Filing fee, designs. In design cases:	
For term of 3 years and 6 months.....	10. 00
For term of 7 years.....	15. 00
For term of 14 years.....	30. 00
4. Filing fee, reissues. On every application for the reissue of a patent..	30. 00
For each claim which is in excess of 20 as well as in excess of the number of claims in the original patent.....	1. 00
5. On filing each petition for the revival of an abandoned application for patent.....	10. 00
6. On filing each petition for the delayed payment of the final fee.....	10. 00
7. On an appeal for the first time from the primary examiner to the Board of Appeals.....	25. 00
8. On filing each disclaimer.....	10. 00
9. For certification of copies of records, etc., in any case, in addition to the cost of copy certified.....	1. 00
10. For certificate of correction of applicant's mistake.....	10. 00
11. For uncertified printed copies of the specifications and accompanying drawings of patents, except design patents, if in print, each.....	. 25
12. For uncertified printed copies of design patents, if in print.....	. 10
13. For recording every assignment, agreement, or other paper, not exceeding six pages.....	3. 00
For each additional patent or application included or involved in one writing, where more than one is so included or involved, additional..	. 50
For each additional two pages or less.....	1. 00

14. For typewritten copies of records, for each page produced (double-spaced) or fraction thereof.....	\$1. 00
15. For photocopies or other reproductions of records, drawings or printed material, per page of material copied.....	. 30
16. For abstracts of title to each patent or application:	
For the search, one hour or less, and certificate.....	3. 00
Each additional hour or fraction thereof.....	1. 50
For each brief from the digest of assignments, of 200 words or less.....	1. 00
Each additional 100 words or fraction thereof.....	. 10
17. For translations from foreign languages into English, made only of references cited in applications or of papers filed in the Patent Office insofar as facilities may be available:	
Written translations, for every 100 words of the original language, or fraction thereof.....	3. 00
Oral translations (dictation or assistance), for each one-half hour or fraction thereof that service is rendered.....	4. 00
18. For making patent drawings, when facilities are available, the cost of making the same, minimum charge per sheet.....	25. 00
19. For correcting drawings, the cost of making the correction, minimum charge.....	3. 00
20. For the mounting of unmounted drawings and photoprints received with patent applications, provided they are of approved permanency.....	1. 00
21. Lists of U.S. Patents:	
All patents in a subclass, per sheet (containing 100 patent numbers or less).....	. 30
Patents in a subclass limited by date or patent number, per sheet (containing 50 numbers or less).....	. 30
22. Search of Patent Office records for purposes not otherwise specified in this section, per hour of search or fraction thereof.....	3. 00
23. For special service to expedite furnishing items or services ahead of regular order:	
On orders for copies of U.S. patents and trademark registrations, in addition to the charge for the copies, for each copy ordered.....	. 25
On all other orders or requests for which special service facilities are available, in addition to the regular charge, a special service charge equal to the amount of regular charge; minimum special service charge per order or request.....	1. 00
24. For air mail delivery:	
On "special service" orders to destinations to which U.S. domestic air mail postage rates apply, no additional charge.	
On regular service orders to any destination and "special service" orders to destinations other than those specified in the preceding subparagraph, an additional charge equal to the amount of air mail postage. (Available only when the ordering party has, with the Patent Office, a deposit account.)	
25. For items and services, that the Commissioner finds may be supplied, for which fees are not specified by statute or by this section, such charges as may be determined by the Commissioner with respect to each such item or service.	

The following are sold by the Clearinghouse for Federal Scientific and Technical Information (CFSTI), 5285 Port Royal Road, Springfield, Va., 22151, to whom all communications respecting the same should be addressed:

*Microfilm Lists of Patents.*—The reels containing the mechanical, electrical and chemical patent numbers in original and cross-referenced classification may be purchased for \$70.00 or individual reels for \$6.00 per reel (identified as PB 163,664). The classification of all design patents is listed on a single reel which may be purchased for \$6.00 (PB 163,665).

The following publications are sold, and the prices for them fixed, by the Superintendent of Documents, Government Printing Office, Washington, D.C., 20402, to whom all communications respecting the same should be addressed:

Official Gazette of the United States Patent Office:	
Annual subscription, domestic.....	\$35.00
Annual subscription, foreign.....	45.00
Single numbers.....	1.00
Annual Index Relating to Patents, price varies.	
Decisions of the Commissioner of Patents, price varies.	
Manual of Classifications of Patents.....	8.50
Foreign.....	10.50
Manual of Patent Examining Procedure.....	4.00
Foreign.....	5.00
Patents and Inventions, An Information Aid for Inventors.....	.15
Rules of Practice of the United States Patent Office in Patent Cases.....	.50
Trademark Rules of Practice of the United States Patent Office With Forms and Statutes.....	.45
Patent Laws.....	.30
Patent Attorneys and Agents Available to Represent Inventors Before the United States Patent Office.....	.55
Roster of Attorneys and Agents Registered to Practice Before the United States Patent Office.....	.70
Guide for Patent Draftsmen.....	.15
How to Obtain Information from United States Patents.....	.20

THE ABOVE PRICES ARE SUBJECT TO CHANGE WITHOUT NOTICE.

All payment of money required for Patent Office fees should be made in United States specie, Treasury notes, national bank notes, post office money orders or postal notes payable in Washington, D.C., or by certified checks. If sent in any other form, the Office may delay or cancel the credit until collection is made. Postage stamps are not acceptable. Money orders and checks must be made payable to the Commissioner of Patents. Remittances from foreign countries must be payable and immediately negotiable in the United States for the full amount of the fee required.

Money paid by actual mistake or in excess, such as a payment not required by law, will be refunded, but a mere change of purpose after the payment of money, as when a party desires to withdraw his application for a patent or to withdraw an appeal, will not entitle a party to demand such a return. Amounts of 10 cents or less will not be returned unless specifically demanded, within a reasonable time, nor will the payer be notified of such amount; amounts over 10 cents but less than \$1 may be returned in postage stamps, and other amounts by check.

## FORMS

The following forms illustrate the manner of preparing parts of applications for patent and other papers. Additional forms are given in the Rules of Practice. Forms for patent specifications and drawings are not given since these vary so considerably. Specifications and drawings of patents may be inspected and studied in those libraries which maintain

collections of patents (see p. 10), particular patents of interest can be located from the Official Gazette (see p. 6) and copies purchased:

1. Patent Application, sole inventor; petition and oath.
2. Patent Application, joint inventors; petition and oath.
3. Patent Application, Administrator of estate of deceased inventor; petition and oath.
4. Oath not accompanying application.
5. Design Application; petition, specification, oath.
6. Plant patent application, petition and oath.
7. Power of attorney or authorization of agent, not accompanying application.
8. Revocation of power of attorney or authorization of agent.
9. Assignment of patent.
10. Assignment of application.

## 1. PATENT APPLICATION, SOLE INVENTOR; PETITION, POWER OF ATTORNEY, OATH

### TO THE COMMISSIONER OF PATENTS:

Your petitioner, \_\_\_\_\_, a citizen of the United States and a resident of \_\_\_\_\_, State of \_\_\_\_\_, whose post-office address is \_\_\_\_\_, prays that letters patent may be granted to him for the improvement in \_\_\_\_\_, set forth in the following specification; and he hereby appoints \_\_\_\_\_, of \_\_\_\_\_, (Registration No. \_\_\_\_\_), his attorney (or agent) to prosecute this application and to transact all business in the Patent Office connected therewith. (If no power of attorney is to be included in the application, omit the appointment of the attorney.)

[The specification, which includes the description of the invention and the claims, is written here.]

\_\_\_\_\_, the above-named petitioner, being sworn (or affirmed), deposes and says that he is a citizen of the United States and resident of \_\_\_\_\_, State of \_\_\_\_\_, that he verily believes himself to be the original, first, and sole inventor of the improvement in \_\_\_\_\_ described and claimed in the foregoing specification; that he does not know and does not believe that the same was ever known or used before his invention thereof, or patented or described in any printed publication in any country before his invention thereof, or more than one year prior to this application, or in public use or on sale in the United States for more than one year prior to this application; that said invention has not been patented in any country foreign to the United States on an application filed by him or his legal representatives or assigns more than twelve months prior to this application; and that no application for patent on said invention has been filed by him or his representatives or assigns in any country foreign to the United States, except as follows \_\_\_\_\_

STATE OF \_\_\_\_\_ }  
County of \_\_\_\_\_ } ss: \_\_\_\_\_ (Inventor's full signature)  
Sworn to and subscribed before me this \_\_\_\_\_ day of \_\_\_\_\_, 19\_\_\_\_.  
[SEAL] \_\_\_\_\_  
\_\_\_\_\_  
(Signature of notary or officer)  
\_\_\_\_\_  
(Official character)

## 2. PATENT APPLICATION, JOINT INVENTORS; PETITION, POWER OF ATTORNEY, OATH

### TO THE COMMISSIONER OF PATENTS:

Your petitioners, \_\_\_\_\_ and \_\_\_\_\_, citizens of the United States and residents, respectively, of \_\_\_\_\_, State of \_\_\_\_\_, and of \_\_\_\_\_, State of \_\_\_\_\_,

whose post-office addresses are, respectively, \_\_\_\_\_ and \_\_\_\_\_ pray that letters patent may be granted to them, as joint inventors, for the improvement in \_\_\_\_\_, set forth in the following specification; and they hereby appoint \_\_\_\_\_, of \_\_\_\_\_ (Registration No. \_\_\_\_\_), their attorney (or agent), to prosecute this application and to transact all business in the Patent Office connected therewith. (If no power of attorney is to be included in the application, omit the appointment of the attorney.)

[The specification, which includes the description of the invention and the claims, is written here.]

\_\_\_\_\_ and \_\_\_\_\_, the above-named petitioners, being sworn (or affirmed), depose and say that they are citizens of the United States, and residents of \_\_\_\_\_, State of \_\_\_\_\_, that they verily believe themselves to be the original, first and joint inventors of the improvement in \_\_\_\_\_ described and claimed in the foregoing specification; that they do not know and do not believe that the same was ever known or used before their invention thereof, or patented or described in any printed publication in any country before their invention thereof, or more than one year prior to this application, or in public use or on sale in the United States for more than one year prior to this application; that said invention has not been patented in any country foreign to the United States on an application filed by them or their legal representatives or assigns more than 12 months prior to this application; and that no application for patent on said invention has been filed by them or their representatives or assigns in any country foreign to the United States, except as follows: \_\_\_\_\_

\_\_\_\_\_  
\_\_\_\_\_  
(Inventors' full signatures)

STATE OF \_\_\_\_\_ }  
County of \_\_\_\_\_ } ss:

Sworn to and subscribed before me this \_\_\_\_\_ day of \_\_\_\_\_, 19\_\_\_\_.

\_\_\_\_\_  
(Signature of notary or officer)

[SEAL]

\_\_\_\_\_  
(Official character)

### 3. PATENT APPLICATION, ADMINISTRATOR OF DECEASED INVENTOR; PETITION, POWER OF ATTORNEY, OATH

TO THE COMMISSIONER OF PATENTS:

Your petitioner, A \_\_\_\_\_ B \_\_\_\_\_, a citizen of the United States and a resident of \_\_\_\_\_, State of \_\_\_\_\_, whose post-office address is \_\_\_\_\_, administrator of the estate of C \_\_\_\_\_ D \_\_\_\_\_, late a citizen of the United States and a resident of \_\_\_\_\_, State of \_\_\_\_\_, deceased (as by reference to the duly certified copy of letters of administration, hereto annexed, will more fully appear), prays that letters patent may be granted to him for the invention of the said C \_\_\_\_\_ D \_\_\_\_\_ for an improvement in \_\_\_\_\_, set forth in the following specification; and he hereby appoints \_\_\_\_\_, of \_\_\_\_\_ (Registration No. \_\_\_\_\_), his attorney (or agent), to prosecute this application and to transact all business in the Patent Office connected therewith.

(If no power of attorney is to be included in the application, omit the appointment of the attorney.)

[The specification, which includes the description of the invention and the claims, is written here.]

A \_\_\_\_\_ B \_\_\_\_\_, the above-named petitioner, being sworn (or affirmed), deposes and says that he is a citizen of the United States of America and a resident of \_\_\_\_\_, that he is the administrator of the estate (or executor of the last will and testament) of C \_\_\_\_\_ D \_\_\_\_\_,

deceased, late a citizen of the United States and resident of \_\_\_\_\_,  
that he verily believes the said C \_\_\_\_\_ D \_\_\_\_\_ to be the original,  
first and sole inventor of the improvement in \_\_\_\_\_ described and  
claimed in the foregoing specification; that he does not know and does not believe  
that the same was ever known or used before the invention thereof by the said  
C \_\_\_\_\_ D \_\_\_\_\_, or patented or described in any printed publication  
in any country before the said invention thereof, or more than one year prior to this  
application, or in public use or on sale in the United States for more than one year  
prior to this application; that said invention has not been patented in any country  
foreign to the United States on an application filed by the said C \_\_\_\_\_  
D \_\_\_\_\_ or his legal representatives or assigns more than 12 months prior  
to this application; and that no application for patent on said invention has been filed  
by the said C \_\_\_\_\_ D \_\_\_\_\_ or his representatives or assigns in any  
country foreign to the United States, except as follows: \_\_\_\_\_

A \_\_\_\_\_ B \_\_\_\_\_  
(Signature)

ADMINISTRATOR, ETC.

STATE OF \_\_\_\_\_ }  
County of \_\_\_\_\_ } ss:

Sworn to and subscribed before me this \_\_\_\_\_ day of \_\_\_\_\_, 19\_\_.

[SEAL] \_\_\_\_\_  
(Signature of notary or officer)  
\_\_\_\_\_  
(Official character)

4. OATH NOT ACCOMPANYING APPLICATION

STATE OF \_\_\_\_\_ }  
County of \_\_\_\_\_ } ss:

\_\_\_\_\_, being sworn (or affirmed), deposes and says that he is a  
citizen of the United States of America and resident of \_\_\_\_\_, that on  
\_\_\_\_\_, 19\_\_, he filed application for patent Serial No. \_\_\_\_\_ in  
the United States Patent Office, that he verily believes himself to be the original,  
first and sole inventor of the improvement in \_\_\_\_\_ described and  
claimed in the specification of said application for patent; that he does not know and  
does not believe that the same was ever known or used before his invention thereof,  
or patented or described in any printed publication in any country before his inven-  
tion thereof, or more than one year prior to the date of said application, or in public  
use or on sale in the United States for more than one year prior to the date of said  
application; that said invention has not been patented before the date of said applica-  
tion in any country foreign to the United States on an application filed by him or  
his legal representatives or assigns more than twelve months prior to the date of said  
application; and that no application for patent on said invention has been filed by  
him or his representatives or assigns in any country foreign to the United States,  
except as follows: \_\_\_\_\_

\_\_\_\_\_  
(Inventor's full signature)

Sworn to and subscribed before me this \_\_\_\_\_ day of \_\_\_\_\_, 19\_\_.

## 5. DESIGN APPLICATION

TO THE COMMISSIONER OF PATENTS:

Your petitioner, \_\_\_\_\_, a citizen of the United States and a resident of \_\_\_\_\_ in the county of \_\_\_\_\_ and State of \_\_\_\_\_, whose post-office address is \_\_\_\_\_, city of \_\_\_\_\_, State of \_\_\_\_\_, prays that letters patent may be granted to him for the term of 3½ years (or 7 years or 14 years) for the new and original design for \_\_\_\_\_, set forth in the following specification; and he hereby appoints, \_\_\_\_\_, of \_\_\_\_\_, (Registration No. \_\_\_\_\_), his attorney (or agent), to prosecute this application and to transact all business in the Patent Office connected therewith.

Be it known that I have invented a new, original, and ornamental design for \_\_\_\_\_ of which the following is a specification, reference being had to the accompanying drawing, forming a part hereof.

The figure is a plan view of a \_\_\_\_\_, showing my new design.

I claim:

The ornamental design for a \_\_\_\_\_, as shown.

\_\_\_\_\_, the above-named petitioner being sworn (or affirmed), deposes and says that he is a citizen of the United States and resident of county of \_\_\_\_\_, State of \_\_\_\_\_, that he verily believes himself to be the original, first, and sole inventor of the design for \_\_\_\_\_ described and claimed in the foregoing specification; that he does not know and does not believe that the same was ever known or used before his invention thereof, or patented or described in any printed publication in any country before his invention thereof, or more than one year prior to this application, or in public use or on sale in the United States for more than one year prior to this application; that said design has not been patented in any country foreign to the United States on an application filed by him or his legal representatives or assigns more than 6 months prior to this application; and that no application for patent on said design has been filed by him or his representatives or assigns in any country foreign to the United States, except as follows: \_\_\_\_\_

## 6. PLANT PATENT APPLICATION; PETITION, POWER OF ATTORNEY, OATH

TO THE COMMISSIONER OF PATENTS:

Your petitioner, \_\_\_\_\_, a citizen of the United States and a resident of \_\_\_\_\_, in the State of \_\_\_\_\_, whose post-office address is \_\_\_\_\_, prays that letters patent may be granted to him for the new and distinct variety of \_\_\_\_\_, set forth in the following specification; and he hereby appoints \_\_\_\_\_, of \_\_\_\_\_, (Registration No. \_\_\_\_\_), his attorney (or agent), to prosecute this application and to transact all business in the Patent Office connected therewith.

(If no power of attorney is to be included in the application, omit the appointment of the attorney.)

[The specification, which includes the description of the invention and the claims, is written here.]

\_\_\_\_\_, the above-named petitioner, being sworn (or affirmed), deposes and says that he is a citizen of the United States of America and resident

of \_\_\_\_\_, that he verily believes himself to be the original, first, and sole inventor of the new and distinct variety of \_\_\_\_\_ described and claimed in the foregoing specification; that he has asexually reproduced the said new and distinct variety; that he does not know and does not believe that the same was ever known or used before his invention thereof, or patented or described in any printed publication in any country before his invention thereof, or more than one year prior to this application, or in public use or on sale in the United States for more than one year prior to this application; that said invention has not been patented in any country foreign to the United States on an application filed by him or his legal representatives or assigns more than 12 months prior to this application; and that no application for patent on said new and distinct variety of plant has been filed by him or his representatives or assigns in any country foreign to the United States, except as follows: \_\_\_\_\_

STATE OF \_\_\_\_\_ }  
County of \_\_\_\_\_ } ss:

Sworn to and subscribed before me this \_\_\_\_\_ day of \_\_\_\_\_, 19\_\_\_\_.

#### 7. POWER OF ATTORNEY OR AUTHORIZATION OF AGENT, NOT ACCOMPANYING APPLICATION

TO THE COMMISSIONER OF PATENTS:

The undersigned having, on or about the \_\_\_\_\_ day of \_\_\_\_\_, 19\_\_\_\_, made application for letters patent for an improvement in \_\_\_\_\_, Serial Number \_\_\_\_\_, hereby appoints \_\_\_\_\_ of \_\_\_\_\_, State of \_\_\_\_\_, Registration No. \_\_\_\_\_, his attorney (or agent), to prosecute said application, and to transact all business in the Patent Office connected therewith.

\_\_\_\_\_  
(Signature)

#### 8. REVOCATION OF POWER OF ATTORNEY OR AUTHORIZATION OF AGENT

TO THE COMMISSIONER OF PATENTS:

The undersigned having, on or about the \_\_\_\_\_ day of \_\_\_\_\_, 19\_\_\_\_, appointed \_\_\_\_\_ of \_\_\_\_\_, State of \_\_\_\_\_, his attorney (or agent) to prosecute an application for letters patent which application was filed on or about the \_\_\_\_\_ day of \_\_\_\_\_, 19\_\_\_\_, for an improvement in \_\_\_\_\_, Serial Number \_\_\_\_\_, hereby revokes the power of attorney (or authorization of agent) then given.

\_\_\_\_\_  
(Signature)

#### 9. ASSIGNMENT OF PATENT

(No special form is prescribed for assignments, which may contain various provisions depending upon the agreement of the parties. The following two form are specimens of assignments which have been used in some cases.)

WHEREAS, I, \_\_\_\_\_, of \_\_\_\_\_, did obtain Letters Patent of the United States for an improvement in \_\_\_\_\_ No. \_\_\_\_\_, dated \_\_\_\_\_; and whereas, I am now the sole owner of said patent; and,

WHEREAS, \_\_\_\_\_, of \_\_\_\_\_, whose post-office address is \_\_\_\_\_, City of \_\_\_\_\_, and State of \_\_\_\_\_, is desirous of acquiring the entire interest in the same;

Now, THEREFORE, in consideration of the sum of \_\_\_\_\_ dollars (\$\_\_\_\_\_), the receipt of which is hereby acknowledged, and other good and valuable considerations, I, \_\_\_\_\_, by these presents do sell, assign, and transfer unto the said \_\_\_\_\_, the entire right, title, and interest in and to the said Letters Patent aforesaid; the same to be held and enjoyed by the said \_\_\_\_\_, for his own use and behoof, and for his legal representatives and assigns, to the full end of the term for which said Letters Patent are granted, as fully and entirely as the same would have been held by me had this assignment and sale not been made.

Executed, this \_\_\_\_\_ day of \_\_\_\_\_, 19\_\_\_\_, at \_\_\_\_\_.

STATE OF \_\_\_\_\_ }  
County of \_\_\_\_\_ } ss:

Before me personally appeared said \_\_\_\_\_ and acknowledged the foregoing instrument to be his free act and deed this \_\_\_\_\_ day of \_\_\_\_\_, 19\_\_\_\_.

[SEAL]

#### 10. ASSIGNMENT OF APPLICATION

WHEREAS, I, \_\_\_\_\_, of \_\_\_\_\_ have invented certain new and useful Improvements in \_\_\_\_\_, for which an application for United States Letters Patent was filed on \_\_\_\_\_, Serial No. \_\_\_\_\_, [if the application has been prepared but not yet filed, state "for which an application for United States Letters Patent was executed on \_\_\_\_\_," instead] and

WHEREAS, \_\_\_\_\_, of \_\_\_\_\_, whose post-office address is \_\_\_\_\_, is desirous of acquiring the entire right, title and interest in the same;

Now, THEREFORE, in consideration of the sum of \_\_\_\_\_ dollars (\$\_\_\_\_\_), the receipt whereof is hereby acknowledged, and other good and valuable consideration, I, the said \_\_\_\_\_, by these presents do sell, assign and transfer unto said \_\_\_\_\_, the full and exclusive right to the said invention in the United States and the entire right, title, and interest in and to any and all Letters Patent which may be granted, therefore in the United States.

I hereby authorize and request the Commissioner of Patents to issue said Letters Patent to said \_\_\_\_\_, as the assignee of the entire right, title, and interest in and to the same, for his sole use and behoof; and for the use and behoof of his legal representatives, to the full end of the term for which said Letters Patent may be granted, as fully and entirely as the same would have been held by me had this assignment and sale not been made.

Executed this \_\_\_\_\_ day of \_\_\_\_\_, 19\_\_\_\_, at \_\_\_\_\_.

STATE OF \_\_\_\_\_ }  
County of \_\_\_\_\_ } ss:

Before me personally appeared said \_\_\_\_\_ and acknowledged the foregoing instrument to be his free act and deed this \_\_\_\_\_ day of \_\_\_\_\_, 19\_\_\_\_.

[SEAL]

11. DECLARATION WHICH MAY BE INCLUDED IN AN APPLICATION  
IN LIEU OF AN OATH (3.11a)

(Rules 65 and 68 of the Rules of Practice provide for a declaration in lieu of an oath in certain instances. The petition and specification precede the declaration.)

-----, the above-named petitioner ----- declare -----  
that ----- citizen ----- of the United States and resident -----  
of ----- that ----- verily believe -----  
to be the original, first, and ----- inventor ----- of the improve-  
ment in ----- described and claimed in the annexed specification;  
that ----- do ----- not know and do ----- not believe that the  
same was ever known or used before ----- invention thereof, or  
patented or described in any printed publication in any country before -----  
invention thereof, or more than one year prior to this application, or in public use  
or on sale in the United States more than one year prior to this application; that  
said invention has not been patented in any country foreign to the United States  
on an application filed by ----- or ----- legal  
representatives or assigns more than twelve months prior to this application; and that  
no application for patent on said invention has been filed by -----  
or ----- representatives or assigns in any country foreign to the  
United States, except as follows: -----

The undersigned petitioner ----- declare ----- further that all statements made  
herein of ----- own knowledge are true and that all statements  
made on information and belief are believed to be true; and further that these state-  
ments were made with the knowledge that willful false statements and the like so  
made are punishable by fine or imprisonment, or both, under section 1001 of Title 18  
of the United States Code and that such willful false statements may jeopardize the  
validity of the application or any patent issuing thereon.
